

Introducing  
**VapourClean**  
Vapour Phase Cleaner

Product # 0997

## What is VapourClean

VapourClean is a water based detergent/scavenger combo that is designed to be used in high temperature vapour cleaning operations. It uses highly biodegradable high temperature stable surfactants and a water soluble hydrogen sulfide scavenger. The scavenger reacts with any hydrogen sulfide that it contacts resulting in a water soluble byproduct. The scavenger will remove hydrogen sulfide while the detergent component will emulsify other contaminants such as BTEX. Unlike highly caustic solutions, VapourClean will demulsify to an extent on its own.

## Benefits of using VapourClean

Increased Safety

Temperature stable

Not flammable

Removes hydrogen sulfide

Emulsifies hydrocarbons
